

Mobile Computing

Sigma provides commercial grade wireless networking products and services:

Wireless Solutions

- Indoor Wireless LAN
 - Client Devices
 - Mobility Services
 - Location Aware Services
 - Network Management
 - Wireless LAN Controllers
 - Rugged Access Points
- Battery Backup Solutions
- Point-to-Point Bridging
- Wireless Backhaul
- Government-grade wireless
- Harsh wireless environments
- Outdoor Wi-Fi
 - Campus Networks
 - Metro Full Mesh

Network Solutions

- Network Design
- Site Surveys
- RF Engineering
- IP Interoperability
- Surveillance
- Network Audits

Work Your Way with Sigma's Mobility Solutions

Today's employees expect flexible access to applications, services and files on any device at any time. Enterprises that fulfill these expectations with workplace mobility solutions supported by technologies like virtual desktops will drive greater levels of productivity and recruit the best talent. Enable true mobility in your organization with Sigma Solutions to unlock the value of a complete End User Computing strategy.

Sigma Solutions supports these technologies:

- Wired and Wireless IP Networking
- Network Access Control
- Virtual Desktop Solutions
- Smartphones, Thin Clients, Laptops and Tablets
- VPN, Firewalls and Security Software
- Unified Communications
- Messaging Applications
- Audio and Video Conferencing
- BYOD and MDM

While mobility offers many business benefits – faster communication and decision making, better collaboration and remote flexibility – there are challenges CIOs face when delivering a mobile “work your way” experience. Issues such as security, latency and device proliferation need to be addressed in the early planning stages of mobile adoption as part of an end-to-end strategy.

Sigma shortens the path to mobility by:

- Evaluating the readiness of your current network infrastructure to support new technologies and identifying areas of deficiency or noncompliance.
- Laying the groundwork for an architecture that connects devices, applications, and user types and deployments models.
- Equipping your employees with the on-the-move communication technology they need to compete.
- Helping your operations staff support new solutions and establish usage policies and governance models.
- Increasing the robustness of your network and its security posture to ensure protected, always-on connectivity.

Sigma Solutions offers a comprehensive portfolio of consulting services that map your unique business requirements to IT strategy, so that you can foster an environment of untethered collaboration and deliver greater customer satisfaction through mobility.

Why Sigma Solutions?

Vision: Our experience designing and integrating enterprise data center solutions gives our clients access to skills and expertise beyond their in-house IT teams and traditional resellers.

Execution: Our highly-trained professional services team configures and implements complex projects with hardware and software from multiple vendors and suppliers.

Operations: Our managed services team removes the burden of managing specific IT resources, allowing in-house IT teams to focus on more strategic initiatives.

Expertise: Our unmatched technical expertise has been developed via investments in training, certification and technologies.

Proof: Our extensive lab and equipment pool is available for proof-of-concept development and "try before you buy" demonstrations.

Sigma Solutions Professional Services

Sigma Solutions' consulting services combines strong partner technologies, certified and experienced engineers, and proven methodologies to enhance our clients' return on investment and de-risk adopting new technologies:

- **Wireless Network Audits and Assessments:** Sigma works with you to understand your business objectives and assesses your current wireless infrastructure to deliver a detailed analysis along with actionable recommendations.
- **Virtual Desktop Infrastructure (VDI) Assessments:** Taking into account applications, use cases, work roles, data center infrastructure and other factors, we will review your business to determine how adding virtual desktops will affect your data center and the end-user experience.
- **Mobility Implementation Services:** Our suite of technical consulting and design services will help you create a flexible, resilient and scalable architectural foundation to support your business objectives. We'll deploy, configure and test new solutions with the knowledge transfer and documentation to facilitate a smooth transition.

Sigma Solutions One Source Managed Services

Sigma One Source for network infrastructure provides industry standard monitoring, checks the availability and performance of network devices and interfaces and identifies hardware errors. We monitor the network infrastructure utilizing standard SNMP data collection, SNMP trap receiver and Syslog monitoring.

- **AID:** We deliver monitoring, escalation and SOP-based remediation.
- **MANAGE:** This adds Vendor Escalation/Management, plus another layer of services focused on full remediation and complete management of the infrastructure.

Sigma Solutions is the solutions integrator of choice for enterprise companies needing a technology partner that easily transitions from the strategy of the executive suite to the operations of the data center.
